REVERIE

Foreword Simon Farren
MD Reverie limited

I founded Reverie back in May 2000 with the intention of designing niche automotive track day and performance enhancing products, after having worked at Lotus for a number of years, latterly on the management team putting the 340R into production. As well as producing a number of universal fitment race car products, my passion for Lotus cars led me to develop a range of aftermarket accessories purely for Lotus to further improve the performance and on track abilities of these fantastic lightweight sports cars.

Between 2003 and 2005 Reverie was proudly involved in winning one of the largest Motorsport Composite projects for Foggy PETRONAS Racing, involving building 150 full panel sets (inc structural seat unit) for the FP1 homologation special. Reverie in this period employed 20 full time staff and 6 Formula One contractors. All delivery times and quality targets were met by the ReVerie production staff to both the OEM and FP1 Race Team.

Reverie is an established composites manufacturer with a 'can-do' attitude and uniquely, a range of its own, ever expanding motorsport products and accessories; available worldwide directly from Reverie or through our expanding worldwide dealer network. We also have a thriving sub-contract composites manufacturing business to clients such as AER engines, Citroen WRC, Ginetta cars, Mosler, Sails etc (World Championship winning model Yachts), ZYTEK engines and other such clients.

Reverie's well trained and highly passionate staff have been key to the company's success. We possess an excellent knowledge of composite manufacturing processes and our extensive experience allows Reverie to intuitively make a part right first time. We are highly passionate about developing and improving our product range, levels of service and ensuring Reverie stay at the forefront of affordable high quality autoclaved composites.

I would like to thank Lotus tuners; Hangar 111 and Sector 111 for supplying images plus all other loyal customer donations
I hope our product offerings allow you to further enhance, improve and enjoy your Lotus car on track.

The autoclave process

Reverie predominantly use pre-impregnated epoxy thermo set composite materials to ensure high fibre contents can be achieved consistently. We also vacuum bag and autoclave nearly all components to further ensure low void contents and trapped volatiles to maximise interlaminar shear properties by forcing the various layers in the fibre / resin matrix together. This process results in high quality, stiff, lightweight parts achievable time and time again.

Lighter :: faster :: stronger.
